HERITAGE OIL TO PRODUCTION TEST DEEPER HORIZONS IN KINGFISHER WELL IN UGANDA

Calgary, Alberta, February 15, 2007 – Heritage Oil Corporation (TSX: HOC) today announced that it is preparing to production test deeper intervals in the Kingfisher-1A deviated exploration well in Block 3A, Uganda. The Company is planning to test three intervals with a total thickness of 44 metres between 2,260 and 2,367 metres.

A shallower interval, at a depth of 1,783 metres, was tested successfully in the Kingfisher-1 well in November 2006, producing 4,120 bopd over a 10 metre interval. The tested oil was light (c. 30° API) and sweet with a low gas-oil ratio and some associated wax. Flow data from the test indicated the reservoir had an extremely high permeability of over 2,000 milliDarcies.

Kingfisher-1A was drilled to a total depth of 3,195 metres, which was determined to be close to the limit of the rig's operational capability. Wire-line logs and formation pressure testing have evidenced encouraging indications of hydrocarbons over the planned test intervals, the thickest of which is 21 metres.

Heritage currently anticipates that it will commence testing within 10 days. The test program is scheduled to take up to three weeks. Test equipment has remained at the wellsite following the initial successful test of the Kingfisher-1 well.

Further details about Heritage's exploration activities in Uganda, including acquiring a 3D seismic survey and further appraisal drilling to evaluate the deepest potential of the basin will be announced when the results of the test program are available.

Heritage is the Operator of Block 3A in Uganda with a 50% equity interest in the license, with Tullow Oil holding the remaining 50% interest.

The Company's Common Shares trade on the Toronto Stock Exchange under the symbol HOC.

FORWARD-LOOKING STATEMENTS:

Except for statements of historical fact, all statements in this news release – including, without limitation, statements regarding production estimates and future plans and objectives of Heritage – are forward-looking statements that involve various risks and uncertainties. There can be no assurance that such statements will prove to be accurate; actual results and future events could differ materially from those anticipated in such statements. Factors that could cause actual results to differ materially from anticipated results include risks and uncertainties such as: risks relating to estimates of reserves and recoveries; production and operating cost assumptions; development risks and costs; the risk of commodity price fluctuations; political and regulatory risks; and other risks and uncertainties as disclosed under the heading "Risk Factors" and elsewhere in Heritage documents filed from time-to-time with the Toronto Stock Exchange and other regulatory authorities. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.
